## Installation Instructions

Model **PL9300**

**Trailer Lockbox**

**Reset code before lock installation!**

### How to Reset or Code Combination Lock

1. Combination should be set to default code of (0-0-0-0); insert code and open lock by turning the knob clockwise to open door.
2. With the default or last code set, change the code shifter (inside of lock) from A to B.
3. With the code shifter in the B position, reset to desired code.
4. Change the code shifter back to the A position. Code has now been reset and door can be closed. Turn the outside knob counter-clockwise until it clicks into the locked position. Test the lock prior to installation.

### Installing Lockbox onto Trailer

**Step 1:** Remove all contents from packaging (*One Lockbox, Two Mounting Plates, Two Long Carriage Bolts, Two Short Carriage Bolts and 4 Nylock Nuts*).

**Step 2:** Measure trailer tongue height and align one mounting bracket around the trailer tongue by inserting the "long" carriage bolts into the brackets to determine correct hole spacing that provide the tightest fit around the trailer tongue (*see Figure 1 below*).

**Step 3:** Insert the "short" carriage bolts into the mounting bracket in the opposite direction of the long carriage bolts. Align the short bolts with the two large holes (top and bottom) on the backside of the lockbox and secure using two nylock nuts on the inside of the lockbox. Before tightening, make sure the long bolt heads are compressed between the bracket and backside of lockbox. Tighten short carriage bolts with a wrench or socket (*see Figure 2 below*).

**Step 6:** Align the Lockbox onto the trailer tongue and secure with the second mounting plate and nylock nuts (*see Figure 3 below*).

**Step 7:** Tighten nylock nuts to compress the trailer tongue between two mounting plates. For permanent installation and maximum security, apply threadlocker to the long bolts prior to final tightening and allow hours for threadlocker to properly cure.
